

LS2 Circ

Circ the Web

LS2 Circ combines core circulation functionality with the convenience of a Web-based product. Because LS2 Circ is Web-based, there's no need to install anything before deploying the product in your library: at the Circulation desk, on the library floor, in the bookmobile, or any other area with Internet access.

Features include:

- Color themes ("skins") that you can choose from and easily change out;
- Ease of use: LS2 Circ requires minimal training for staff or even volunteers;
- Automatic updates: When your TLC system is upgraded, your workstations will automatically have access to all new features; and
- LS2 Circ is easy on your library's budget. Because LS2 Circ is Web-based, hardware upgrades are usually not required.

LS2 Circ also includes:

Self-Checkout

Borrowers can perform checkout in three simple steps. They scan their library card, scan their items, and scan the "clear screen" barcode. If there are any blocks on a patron's account, LS2 Circ immediately cancels the transactions, and then refers the borrower to a librarian.

Staff-Defined Tabs

LS2 Circ includes four staff-defined tabs that allow linkage to other Web sites. These links might include your PAC, reports, or Internet search engines. Standards compliant sites will maintain their view as you switch between tabs, so you can easily move back and forth between different applications.
