

LS2^{mobile}

LS2 Mobile is a smart-phone interface that allows people to connect with their library from any place with mobile or Wi-Fi Internet service.

TLC developed LS2 Mobile with the understanding that the desire to read a book, research a topic, or find an author may occur anytime, anywhere: A restaurant visit may trigger a search for a certain chef's cookbook; a young reader may want to reserve the latest title in a popular series; a family on the go may want to check out the latest DVD releases; a teen listening to a song in a coffee shop may want to know if his or her school library has that artist's CD; a hiker may want to borrow a guide to birds in the wild. Whatever the need, there's bound to be a book, CD, DVD, or audiobook in the local library.

LS2 Mobile can search a library's entire catalog and reserve titles that a borrower can pick up at a more convenient time. Additionally, users can check their account balances and, if they've had a change of heart, cancel holds on previously reserved titles.

Once installed on a user's smart phone, LS2 Mobile can be set up to search the public catalogs of participating libraries that utilize LS2 PAC, an online interface designed to work exclusively with TLC's Library•Solution, Library•Solution for Schools, and CARL•X integrated library systems.
