Library • Solution[®] for Schools

School districts like yours are choosing The Library Corporation's centralized automation.

Award Winning ...

- Web-based
- Hundreds of preformatted reports
- Daily updates from your Student Information System
- Textbook management
- Media booking
- Active Directory integration
- Authority control
- User reviews and ratings
- Google Analytics compatible
- Saved searches and lists

Leading the Way ...

- Student Information Portal provides easy access to school and district resources, including media center materials, electronic databases, and recommended reading lists
- Integrated RSS news feeds from your choice of sources
- One-click access to bibliography export
- Federated searching from selected providers
- Remote database authentication enables students to access age-appropriate electronic resources from home

Smart Circulation for Schools

Library•Solution® for Schools includes TLC’s LS2 Circ, which combines core circulation functionality with the convenience of a Web-based product. There’s no need to install anything before deploying LS2 Circ at the circulation desk, library workstations, or anywhere else with Internet access.

Attractive, Intuitive

LS2 Circ features a user-friendly interface with colorful themes (“skins”) that you can easily change. Minimal training and short training videos make it easy for staff and even student helpers to operate.

Self-Checkout Options

Students have a choice of two self-checkout methods. They can check out materials by scanning their barcodes, scanning the items, and then scanning the “clear screen” barcode, or they can select their teacher’s picture, then choose their own picture from the class list to proceed.

Smart Workflows

- Hold requests – Staff can easily place a request for the first available copy, or limit a hold request to specific schools or even specific copies
- Custom borrower fields – Keep track of a student’s class schedule, parents or guardians, and other related data
- Responsible party – Easily link a student to his or her teacher, homeroom, or other responsible party

Class Set Functionality and User-Defined Tabs

Need to request 15 copies of a title from across the district? Simply place a hold request and enter the number of copies needed. LS2 Circ determines where the copies are available and sends requests to the appropriate schools.

LS2 Circ provides four tabs that you configure to provide links to other applications. Tabs offer easy access to your school district’s OPAC, TLC’s Reports Manager, Internet search engines like Google or Yahoo, or any other site. Standards-compliant sites will maintain their view when you switch between tabs, so you can easily move back and forth between different applications.

LS2 Kids

Software for the next generation

LS2 Kids is an exciting version of TLC's successful LS2 PAC – the same technology with new features designed to attract young library users.

- Find books in a series more easily with a predefined list of popular titles like “Junie B. Jones” and “The Magic School Bus.”
- An interactive title display allows users to magnify book jackets to screen-filling proportions and find detailed information about their selections. You can read the covers!
- A category wheel offers dozens of subject areas ranging from math and reading to baseball, cats, and scary stories.
- A search box provides spelling suggestions and corrections when needed.

LS2 Kids is intuitive and playful – the perfect companion to TLC's Library•Solution® for Schools.

Find out how Library•Solution® for Schools, LS2 Circ, and LS2 Kids can energize your library and excite your students.
